

MiDoS Search Tool

What is MiDoS?

This is a directory of services (DoS) information search tool which will enable care navigators to search for a wide range of health, community and voluntary services across Cambridgeshire and Peterborough (CAP).

 This is a web-based search tool linked with a variety of service directories to allow users to search for local services via postcode and free text or service area (Mental Health Services).

Why has MiDoS been introduced?

Following the roll out of the Care Navigation programme, the need for a central DoS became clear very quickly. As a result, the CCG has worked in partnership with local practices and care navigation champions to develop and pilot the MiDoS search tool.

The aim of this tool is to -

- Facilitate care navigation within primary care
- Reduce the time spent looking for appropriate services
- Provide a central, up to date directory for the whole of CAP
- Assist staff to get patients seen by the right service, first time

Who can use MiDoS?

To begin with this search tool will be accessed via practice desktops for the use of health professionals. Each practice will be set up with a MiDoS account with a share username and password.

However, we are also reviewing the utility of the MiDoS app which would allow patients to access this search tool supporting independence and self-care.

How will MiDoS be maintained and kept up to date?

The DoS will be managed and maintained centrally via the CCG and MiDoS - Intuiti Solutions Ltd. There is a feedback process in place where issues, questions and proposals for further developments can be raised.

The service information comes from a range of sources from the NHS Pathways DoS, Local Authority and Voluntary Sector databases.

When will MiDoS be available?

This search tool will be made available as a tool kit over the summer of 2018. Please see the attached schedule for time and venues of the upcoming MiDoS demonstrations.
