

Patients may no longer have to wait 15 mins after having their vaccine

You must not drive for 15 minutes after your booster – this is because of risk of fainting.

Given the very low rate of serious allergic reaction, patients may no longer have to wait for 15 minutes at the vaccination centre.

Please inform the vaccination team if you have a history of allergies, particularly to other vaccines, or if you had an immediate reaction after your previous doses, as you will be advised to stay for the 15 minutes.

All patients will receive a leaflet to explain this further.
